The clinicians staffing the Interventional Pain Clinic are specialty-trained in the field of pain medicine.

## Types and Ages of Patients Served

---

Adult and geriatric populations are served in an outpatient setting. The Anesthesia Pain Service sees adult, geriatric, and occasionally pediatric patients in an inpatient setting for epidural patient-controlled analgesia and pain management consultation.

## Outpatient Services

---

Evaluation and treatment are offered to patients with a broad range of chronic pain syndromes. These include, but are not limited to, lumbar disc herniation, cervical syndrome, myofascial syndromes, bursitis, migraine headache, fibromyalgia, chronic neck and shoulder pain, degenerative disc disease (cervical and lumbar), post-laminectomy syndrome, phantom limb pain, incisional pain, abdominal and pelvic pain, nerve injury pain (post-herpetic, diabetic, alcoholic, and traumatic), complex regional pain syndrome (CRPS), sacroiliac joint dysfunction, cranial neuralgia, myofascial pain, and central pain states.

The Clinic provides outpatient services within a clinic setting that includes: initial assessment and medical evaluation, a detailed treatment plan based on history taking, physical examination, cognitive/behavioral assessment and functional evaluation as well as special studies and consultations, as indicated. Treatment methods include interventional pain therapies, nerve blocks, implantable devices and referrals for psychiatry, behavioral medicine, and physical medicine and rehabilitation.
